

Basic Environmental Policy of Toshiba Elevator and Building Systems Corporation

The Toshiba Elevator Group positions environmental initiatives as a critical issue for corporate management. Under the “Essence of Toshiba” concept, we are committed to creating rich value for people, the Earth, and tomorrow and coexisting in harmony with the Earth. Our goal is to start a new future by contributing to the realization of a sustainable society through environmentally conscious operations aimed at low carbon emissions, an emphasis on recycling, and symbiotic relations with nature.

We aim to be a leading eco-friendly company in the elevator industry by promoting environmentally-conscious operations and reduced environmental impact by utilizing an integrated system, from the development of products and systems to the manufacturing, installation, and maintenance services related to our elevators.

◆ Promotion of Environmentally Conscious Business Operations

1. We will evaluate the environmental effects our business activities, products, and services have on biodiversity and other critical environmental issues, set environmental goals to reduce our environmental impact, and promote environmental actions.
2. We will actively work to improve our environmentally conscious operations by conducting audits and reviewing all business activities.
3. We will comply with environmental laws and governmental regulations as well as industry guidelines and our own voluntary standards to which we have agreed.
4. We will raise our employees’ awareness of environmental issues and will work together on environmental conservation.
5. Toshiba Elevator Group operates globally and promotes environmental activities throughout The Group accordingly.

◆ Reduction of Environmental Impact Through Environmentally Conscious Business Activities and the Provision of Environmentally Conscious Products and Services

1. In full recognition of the finite nature of global resources, we will deploy proactive environmental measures to promote more effective utilization and application of our business activities, products, and services.
2. We will provide environment conscious products and services that contribute to reducing our environmental impact throughout their life cycles.
3. We will work on measures to reduce our environmental impact, such as working to reduce climate change, effectively using resources, and properly managing chemical substances, at all stages of our business activities. This includes all work in design, procurement, manufacturing, distribution, sales, construction, maintenance, servicing, and disposal in our elevator business as well as procurement, distribution, construction, disposal in our building and facility business.
4. In order to realize a sustainable society, we will consider the value we provide and the significance our initiatives hold to society and strive to develop environmentally conscious technologies with an eye to the future.

◆ Collaboration With Stakeholders

1. We will actively communicate with various stakeholders, including local communities and society as a whole, to promote collaborative environmental activities

We will inform this Basic Environmental Policy to any and all of our stakeholders including employees of our affiliated companies and business partners, and make this Basic Environmental Policy available to the general public.
